Notes:

Figures may not add to total due to rounding.

In 2011, data is suppressed for cells that round to less than 20 individuals or households. In all other years, the rounded suppression cutoff is 10 individuals or households.

There is a slightly revised methodology for the Newfoundland and Labrador Market Basket Measure as of 2012. For communities on the island of Newfoundland requiring ferry services, the number of ferry trips allotted to the nearest service centre has increased. For Labrador communities requiring ferry services, vehicle cost has been removed, and the ferry cost includes the entire family.

a Using Census definitions of family types (includes couple families, lone-parent families and non-family persons). Please note, beginning in 2000, Statistics Canada began using the term Couple Families for Husband-Wife Families. Couple Families include same sex common law families.

b A couple family consists of a couple living together (married or common-law, including same-sex couples) living at the same address with or without children. Beginning in 2000, same-sex couples reporting as couples are counted as couple families.

c A lone-parent family is a family with only one parent, male or female, with at least one child living with the parent.

d A non-family person is an individual who is not part of a census family, couple family or lone-parent family. Non-family persons may live with their married children or with their children who have children of their own. They may be living with a family to whom they are related or unrelated. They may also be living alone or with other non-family persons.
